Business Intelligence Solutions

Senior level corporate experience at reputable corporations, delivering both trusted reports and the ability to generate information-based agility coupled with data centric insight to those conducting day-to-day business throughout the organization.

Synopsis:

- Participated in data quality and testing, data migration, data governance and data strategy projects.
- Experience in performance measurement metrics, scorecards, executive dashboards, reporting databases.
- Worked in health care, banking, insurance, car rental, food, mortgage, financial services, manufacturing and telecommunications industries as Business Systems Analyst, Performance Analyst, Data Analyst, Consultant, Independent Contractor, Applications Developer, Data Strategist and Solutions Engineer.
- Advance academic training in applying quantitative analysis techniques to financial, economic, operational data series and marketing research.
- Highly productive with MS Access and Excel for custom complex solutions at expert level.
- Work with VBA code to enhance the functionality of Microsoft Office based productivity tools
- Experienced in activity-based accounting from database and Business Analysis perspective.
- Capable working with advanced statistical concepts and SQL logic.
- Savvy with database principles for data modeling, extract, transfer, load, map and present data from various platforms to support complex analysis needs for managerial reporting and empirical model building.
- Comfortable in agile environment working as liaison between business stake holders and development teams, attending daily scrum sessions, conducting meetings for data analysis, profiling and source to target mapping.

Career Direction:

- Looking for challenges to evolve my overall professional capacity into a level where, I can be instrumental to deliver full suit of business intelligence solutions.
- Working with abstract data structures of key business processes and having an oversight on the process flows that identify and utilize key strategic drivers to facilitate informed decisions.
- To enable executive decision makers via delivering core metrics and analytics.

Value Add Deliverables:

- Producing information and presenting it in a timely, accurate and actionable manner.
- Ensuring data integrity of reporting resources and automating manual data processes.
- Serving the mission critical processes with sound data analysis techniques.
- Understanding the complex relationships among the key business drivers and entities and reflect them in data models to support reliable reporting structures.
- Building reporting data structures to track transactional, financial, operational activities.
- Compilation of related data sets to capture and model trends and patterns. Incorporating statistical procedures to build predictive models to understand ramifications of activities on performance.
